

Backdraft Dissection Tables

**WITH FUME REMOVAL
FOR USER'S SAFETY**

SGDS Series

Scientek's designers have created an excellent workstation by combining conveniently located features with controlled fume removal. Careful planning together with valuable input from pathologists and technologists has resulted in a workstation which is both functional and easy to maintain. Also, since the air pattern over the work surface is controlled to move harmful vapors down and away from the operator, the Scientek 100 Series Workstation meets or exceeds OSHA and Worker's Safety regulations.

Features such as stainless steel construction throughout, effective lighting, recessed table rinse jets and plenty of storage space, make this unit a welcome addition to any pathology department. Simple connections plus a choice of three methods of air removal, allow installation in almost any location.

- DIRECT VENTILATION EXHAUST SYSTEM
- FAN ASSISTED DIRECT VENTILATION
- RECIRCULATING EXHAUST SYSTEM

Standard floor models are 48' or 72' long, and the sink can be placed on either side of the work area. Where floor space is at a premium, Scientek offers two compact versions of the 100 Series which can be installed on a counter top.

Standard Models Available:

- SGDS-100F-48 (48" Floor Model)
- SGDS-100F-72 (72" Floor Model)
- SGDS-100C (Counter Top Model)
- SGDS-100CS (Recessed Counter Top Model)

Custom sizes and layouts are available upon request.
